

SRCSD School A- Pace Florida Weather Delay Log – July 2022

As shown on the attached data, we experienced schedule impacts due to excessive rain this month. There were twenty-two (22) days of measurable rainfall over .01", compared to a 30-year average of fourteen (14) days (see spec section 00073-1). This rainfall impacted the steel erection, concrete, framing, sheeting, roofing, waterproofing, and mechanical trades.

We have worked every weekend of this month to minimize the impact of the weather delays.

We are requesting eight (8) calendar days be added to the contract date.

Thank you,

Charles Satterfield Project Manager
